Summery

I am Irfanul Haque Sajid. I am experienced in frontend technologies and also have primary knowledge of some backend technologies. I have completed some projects using react on the client-side and node.js on the server-side which are mentioned below as sample projects. Hope so my experience will full-fill your needs.

Skill Sets

- **Comfortable**: HTML, CSS, Bootstrap, Tailwind CSS, JavaScript, React, Context API, Node.js, MongoDB, Express, Firebase
- **Familiar**: C, Java, TypeScript, JWT Token, Material UI, Stripe, MapBox-gl
- **Tools**: git, GitHub, npm, VS Code, Chrome Dev Tool, Netlify, Heroku, Figma, Ubuntu

Sample Projects

1. Qutir-Mahal (MERN Stack)

GitHub Client Side | GitHub Server Side | Live Preview

- Users can register by email, password or login by google sign in to order any product
- All the orders will be stored on the dashboard and user can post a review or delete any order
- A feature has been developed for admin so that only admin can access the role of admin, manage all orders, all products and make a new admin

Technology Used: React, Node.js, React Bootstrap, MongoDB, Heroku and Firebase

2. TourMania the Tour Management Site (MERN Stack)

GitHub Client Side | GitHub Server Side | Live Preview

- Login, Registration and login with google has been implemented with firebase.
- Users can book any tour packages after successfully logged in.
- All the booked orders will be stored on My Orders Page and user can delete any

Technology Used: React, Node.js, MongoDB, React Bootstrap, Heroku, Firebase

3. MedSphere the Healthcare Site (Front-End)

GitHub Client Side | Live Preview

- A healthcare related site where users will see the available doctors and all services on the homepage
- Users can also login via google and explore their service details by clicking details button
- Users will see the details of specific services according to service id.

Technology Used: React, React Bootstrap, Fake API and Firebase
